This supplementary material provides details of experimental design and results of the main paper that had been omitted for brevity.

LIST OF TABLES

I	Specifications of the tests. P indicates the benchmark problem. Type corresponds to the DM types shown in Table 1 of the main paper (for minimization). n : dimension of the problem. m : dimension of the objective space. $U(\mathbf{z}^{\text{MPS}})$: utility of \mathbf{z}^{MPS} . $U(\mathbf{z}^w)$: utility of the worst PF solution. UF column specifies the utility function used in the test where “tst” stands for the Stewart UF and “tch” for the Tchebychef UF.	2
II	The parameters and the ranges that are used in cross validation of DTEMOA	3
III	The results of experiments under ideal conditions for BCEMOA, DTEMOA and iTDEA. The mean (and standard deviation in parenthesis) over 20 independent runs is shown for each test. The values are rounded to 2 decimal points. The performance of DTEMOA is compared with iTDEA and BCEMOA and the better values are indicated with letter ‘i’ or ‘b’ (indicating iTDEA or BCEMOA) to highlight the winner where $p\text{-value} \leq 0.05$ for Wilcoxon test. P : ID of the DTLZ benchmark problem. m : dimension of the objective space. type: DM type.	3
IV	The results of experiments with simulation of inconsistencies in DM’s decisions for BCEMOA, DTEMOA and iTDEA. The mean (and standard deviation in parenthesis) over 20 independent runs is shown for each test. The values are rounded to 2 decimal points. The performance of DTEMOA is compared with iTDEA and BCEMOA and the better values are indicated with letter ‘i’ or ‘b’ (indicating iTDEA or BCEMOA) to highlight the winner where $p\text{-value} \leq 0.05$ for Wilcoxon test. P : ID of the DTLZ benchmark problem. m : dimension of the objective space. type: DM type.	4

I. EXPERIMENTAL DESIGN & RESULTS

Table I: Specifications of the tests. **P** indicates the benchmark problem. Type corresponds to the DM types shown in Table 1 of the main paper (for minimization). n : dimension of the problem. m : dimension of the objective space. $U(\mathbf{z}^{\text{MPS}})$: utility of \mathbf{z}^{MPS} . $U(\mathbf{z}^w)$: utility of the worst PF solution. UF column specifies the utility function used in the test where “tst” stands for the Stewart UF and “tch” for the Tchebychef UF.

Table IV: The results of experiments with simulation of inconsistencies in DM’s decisions for BCEMOA, DTEMOA and iTDEA. The mean (and standard deviation in parenthesis) over 20 independent runs is shown for each test. The values are rounded to 2 decimal points. The performance of DTEMOA is compared with iTDEA and BCEMOA and the better values are indicated with letter ‘i’ or ‘b’ (indicating iTDEA or BCEMOA) to highlight the winner where $p\text{-value} \leq 0.05$ for Wilcoxon test. P : ID of the DTLZ benchmark problem. m : dimension of the objective space. type: DM type.
